10 February 1986

MEMORANDUM FOR: [   ]   STAT
                         Chairman, DCI Intelligence Information
                         Handling Committee

FROM: [   ]   STAT
                         Chief, Administrative Security Division
                         Support Group
                         National Intelligence Emergency Support Office

SUBJECT: Guidance on Format for Response to a
                         HAC-Requested Report on Security Implications
                         of Expanded Use of Computers and Office
                         Automation Equipment

REFERENCE: Memo from DCI/IIHC to DD/NIESO, dtd 17 Jan 86,
                         Same Subject

A survey within the National Intelligence Emergency Support
Office (NIESO) has determined that the security practices and
procedures currently utilized with automated systems are in
conformity with CIA directives. Details regarding these
procedures have been incorporated in the response furnished
your office by the Office of Information Technology.

                                                                                  STAT

                                                                                  STAT

SECRET

On 24 February 1986, [   ] (NIESO) verbally passed the
following information about the current and proposed equipment at NIESO:

--   WANG Alliance - Currently 43 workstations with 660,000 pages of
                     hard disk storage. Floppies are used for backup,
                     but are limited to system administrator. Within
                     the next three years, NIESO will have 86 terminals
                     tied to the WANG system. It is estimated that each
                     office will have access to between 30,000-60,000
                     pages of unclassified and classified material
                     stored on the system.

--   DEC PRO 380   - Currently 18 workstations - no classified.
                     Plan for 6 more workstations.
